

ARSENIY PEREL

AI Product Builder | AI Automation | Rapid Prototyping

Ramat Gan, Israel | arielperseny@gmail.com | LinkedIn | github.com/aisarus | Portfolio

PROFILE

AI-native product builder who turns ambiguous product and business problems into working, verifiable systems. Strongest at product definition, task decomposition, agent orchestration, rapid prototyping, implementation oversight, failure diagnosis and evidence-based iteration. Most implementation work is AI-assisted; ownership is in the constraints, architecture, review, diagnosis and verification.

SELECTED PROJECTS

Aegis - Autonomous AI Development Operator

Product Owner / System Designer / AI-native Builder | 2026 | github.com/aisarus/aegis-operator

- Designed an experimental operator that compiles vague goals into acceptance contracts and jobs, routes work by capability, collects evidence, rejects bad results and replans instead of blindly retrying.
- Diagnosed live failures around session lifecycle, false quota attribution, loop-detection interference, stale state and concurrency/resource isolation; public snapshot includes representative source and regression tests.

Lamdan - AI-first Academic Content Workspace

Product Owner / AI-native Builder | 2026 | github.com/aisarus/syllabus-to-os

- Directed an AI study prototype toward a source-linked multilingual workspace with reviewable generated material, syllabus workflows, persistence, backup/rollback and browser E2E coverage.
- Kept product claims bounded by evidence: OCR quality and educational outcomes are not presented as validated where suitable evaluation data was unavailable.

BotForge - AI Telegram Automation SaaS Prototype

Product Owner / AI-native Builder | 2026 | github.com/aisarus/ai-employee-forge

- Expanded a generated SaaS concept into a real integration stack using React/TypeScript, Supabase Auth, PostgreSQL/RLS, Deno Edge Functions, Telegram Bot API, conversation history and BYOK model access.
- Used repository/security review to separate convincing UI simulation from backend behavior and removed a client-side authorization bypass rather than hiding it.

CORE CAPABILITIES

AI-native delivery: coding-agent workflows, prompt/contract design, implementation review, failure diagnosis, corrective iteration. **Product & systems:** requirements, acceptance criteria, guardrails, human-in-the-loop workflows, cost/capability trade-offs, incident analysis. **Technical exposure:** Git/GitHub, React/TypeScript, JavaScript/Node.js, Electron, Vite, Tailwind, Supabase, PostgreSQL/RLS concepts, Edge Functions, REST/webhooks, Telegram Bot API, Python/FastAPI exposure, Three.js.

EXPERIENCE

Shifka / Wix - Operations & Logistics | Nov 2024-Mar 2025 - recurring workplace logistics, distribution, supplies, ordering and time-sensitive daily routines in a large office environment.

Israel Defense Forces - Education NCO / Mashak Hinukh | 2023-Aug 2024 - educational and organizational role coordinating activities and working directly with soldiers and staff.

EDUCATION & LANGUAGES

Bar-Ilan University - Incoming B.A. student, Multidisciplinary Social Sciences, Hi-Tech Track (2026); Mechinat Olim completed 2026. **Languages:** Russian - Native; English - Professional working proficiency; Hebrew - Working / academic proficiency.
